BSNL to launch 4G in 14 circles

New Delhi: State-owned BSNL is gearing up to launch 4G services in 14 telecom circles where it has 20 MHz liberalised broadband wireless access (BWA) spectrum. It, which has already soft launched 4G services in Chandigarh, is exploring two methods — revenue sharing model and capex model — for the 4G rollout. It has 20 MHz liberalised spectrum in 2,500 MHz band which allows it to rollout 4G services without any licensing hurdles. A senior official said BSNL will be installing 4G base tower stations in the existing GSM sites, which means there will be no additional expenditure. — PTI
